

# DrawAI: from raster scientific figures to editable SVG/PPTX

A raster diagram is reconstructed as a semantic vector object graph, then edited through standard document tools.

## (a) Raster input

Image-only scientific figure

Pixels only

Text, arrows, and formulas are locked inside the bitmap.

No object handles

No direct PPT editing

reconstruct

## (b) Semantic editable reconstruction

Visual fidelity plus object-level structure

export / edit

## (c) Editable outputs

Same figure, exposed through standard editing surfaces

SVG editor

PowerPoint

Object-level edits enabled

- Edit text
- Move arrows
- Restyle shapes
- SVG
- PPTX
- Preserved assets

Output artifacts: semantic.svg + editable PPTX

Text, formulas, connectors, and grouped shapes remain independently selectable after reconstruction.
